

## Our Specialties

### Open MRI

The most open, patient-friendly MRI system of its kind in the world, the GE Signa Ovation produces high quality images that allow quick, accurate diagnosis. This new generation of Open MRI offers patients a comfortable environment, so they experience less fear or anxiety.

### CT Scan

A Multi-Slice CT scanner allows for greater imaging capability. It works by scanning thin layers of information to paint a clear image, allowing you and your physician the most accurate results possible.

### Computed Radiology

A step above conventional radiography, this technology revolves around imaging plates that digitize images. The advantage? Images are displayed instantly and can be easily adjusted. Saved on discs, images can either be transmitted off-site or stored.

## See Our Difference

All of our imaging is digital. What does this mean for you? Faster results. Our on-site radiologists and clinicians are available to review your tests and deliver results when you need them most. The process begins with the latest technology. Our Picture Archiving Communications System (PACS) and Computed Radiography (CR) increase physician access to clinical and processed data.

## Clear Results

Lincoln Center Radiology is breaking barriers by combining the expertise of academic medicine and sophisticated technology with a highly-trained, caring staff who sees more than a patient. We offer Multi-Slice CT scan, X-ray and MRI that are interpreted by board-certified radiologists and quickly transmitted via fax, CD, or printed report. More than that, we strive for a standard of care that ensures patient visits are productive and meaningful.

We respect your busy schedule and our patients' time. Our professional staff strives to keep office time to a minimum. From 8-5, patients can expect minimum wait, or no wait at all. Designed around efficiency, ease, and expertise, Lincoln Center Radiology delivers what you need most. Answers. Without delay. With compassion.
